DETAILED ACTION

- (1). Applicants' Remarks filed on 11/21/2008 has been received.

The rejections in prior Office Action dated 09/02/2008 is withdrawn in view of the current Remarks.

Allowable Subject Matter

- (2). **Claims 1-27** are allowed.

Reasons for Allowance

- (3). The following is an examiner's statement of reasons for allowance: The instant application is in condition of Allowance because the inlet manifold invented by Applicants overcomes the prior art because the prior arts fail to disclose such arrangement, configuration for the scrubber inlet device.

Closest prior art - Seely et al (US 6530977B2), in that Seeley et al (US 6530977B2) disclose abatement of semiconductor processing gases (Title). As illustrated in the following:

Because the spray is in the inlet device, therefore the inlet manifold of Seeley et al (US 6530977B2) does not have a scrubber interface device in fluid communication with the inlet manifold. In combining with the prior art Johnsgard (US 4986838) for the transition (scrubber interface device), It would not be obvious because the design of Seeley et al (US 6530977) has pyrophoric gases, water spray and hot air inlet are on the same place to mix at one time, instead of tow steps of mixing disclosed by Applicants – 1st mixing of hot gas and effluent gas stream, then the spray in scrubber interface device.

2nd closest prior art Hashikura et al (US 20050085-57A1) – Hashikura et al (US 20050085057A1) disclose gas heating method and gas heating device (Title). Although the heating gas stream mixes with effluent gas in region 11 as shown in the Figure below, the purpose is for dry scrubbing, therefore, the teaching of Hashikura et al (US 20050085057A1) is considered as non-analog art.

The 3rd related prior art Han (US 6090208A) – Han (US 6090208) discloses prevention of clogging in CVD apparatus (Title). As shown in the Figure below, it has hot gas inlet 30 for mixing with effluent. The purpose of using hot inert gas is to prevent condensation, plugging along the transportation line downstream. However, the scrubber interface device before the wet/dry scrubber is not taught by Han (US 6090208), therefore, it is not considered as relevant analog art.

As the result, the instant claims 1-27 present a patentable subject matter as to this date of Allowability Notice.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
